Executive Summary

This report covers the twelfth full year, 1st April 2016 to 31st March 2017, of the Landfill Allowances Scheme (LAS) in Wales¹. The results presented in this report are final. The purpose of the scheme is to ensure diversion of biodegradable municipal waste (BMW) from landfill. Welsh Government sets limits on the amount of BMW waste that local authorities in Wales can landfill.

Compliance headlines

Welsh local authorities sent 90,827² tonnes of BMW to landfill in 2016/17 compared to an overall Wales allowance of 390,000 tonnes. This was seventy-seven percent less (299,173 tonnes) than the allowance. All twenty-two local authorities achieved their individual allocated allowance.

Wales has reduced the amount of BMW sent to landfill by eighty nine per cent (760,662 tonnes³) since the first full year of the scheme in 2005/06. Reducing the amount of BMW waste going to landfill helps to cut greenhouse gas emissions, preventing the production and release of methane into the air from landfill sites. This is important, as methane is twenty five times more powerful than carbon dioxide as a greenhouse gas.

Looking at individual local authority performance for 2016/17, Blaenau Gwent, Cardiff, Denbighshire, Flintshire, Merthyr Tydfil, Monmouthshire, Rhondda Cynon Taf, Torfaen, Vale of Glamorgan and Wrexham used less than ten per cent of their allowances, while Gwynedd and Swansea used over seventy per cent of their allowance.

As a whole, local authorities have continued to make good progress in diverting BMW from landfill. However, meeting the future targets up to 2020 will be particularly challenging for those local authorities that were close to exceeding their 2016/17 individual allowances.

¹ The Landfill Allowance Scheme refers only to local authority collected municipal waste

² Out of a total of 1,589,795 tonnes of municipal solid waste arising by Welsh local authorities

³ 851,489 tonnes of BMW was sent to landfill in 2005/06

1 Background

The Landfill Allowances Scheme (LAS) Wales⁴ was established through the Landfill Allowances Scheme (Wales) Regulations 2004. The purpose of the scheme is to ensure diversion of biodegradable municipal waste (BMW) from landfill. Reducing the amount of BMW waste going to landfill helps to cut greenhouse gas emissions, preventing the production and release of methane into the air from landfill sites. Methane is twenty five times more powerful than carbon dioxide as a greenhouse gas.

Welsh Government sets limits on the amount of BMW waste that local authorities in Wales can landfill. Natural Resources Wales is the Monitoring Authority for the scheme and has the duty to report performance against individual local authorities' annual allowance allocations and the collective total for Wales. Natural Resources Wales is responsible for reconciling the allowances available to each local authority with the amount of BMW that they have sent to landfill. Natural Resources Wales calculate the amount of BMW sent to landfill using a mass balance approach⁵.

The LAS Regulations also state that the amount of biodegradable waste local authorities collect should be sixty one per cent of the total collected municipal waste. The Welsh Government has since reviewed the biodegradability of municipal waste and concluded that this figure is still appropriate.

Within five months of the end of the scheme year, Natural Resources Wales must determine the amount of BMW sent to landfill by each local authority. Natural Resources Wales provides the Welsh Government with the annual reconcilled data on 1st September each year. The Welsh Local Government Association (WLGA) and local authorities are consulted on the data and the final report is published on the Natural Resources Wales website, which acts as the Landfill Allowances register.

Any local authority that exceeds its allowance allocation is reported to the Welsh Government and is liable to financial penalties. The Welsh Government must establish and maintain a penalties register containing details of any such liabilities.

More information relating to the allocation of allowances can be found in the Welsh Government document entitled 'The Landfill Allowance Scheme: Allocation of Allowances 2009-2020'⁶.

⁴ The Landfill Allowances Scheme refers only to local authority collected municipal waste

⁵ The glossary has a brief description of the mass balance approach

⁶http://gov.wales/topics/environmentcountryside/epq/waste_recycling/disposal/landfill/allowances/?lan <u>g=en</u>

2 Validation – Monitoring Authority

The LAS scheme year runs from April 1st to March 31st. Natural Resources Wales use a two stage quarterly process to audit the data after submission into WasteDataFlow⁷ (WDF). Stage one is a desktop audit of all the data submitted by local authorities. Stage two is a validation of WDF using landfill site returns. In 2012 Natural Resources Wales also began quarterly validation of end destination data for the statutory local authority recovery targets. This consists of a desktop audit based on the quantity of material reported as recovered each scheme year.

2.1 Comparison of WDF and Landfill Site Returns

Table 1 shows the figures for the amount of landfilled municipal waste validated by Natural Resources Wales in 2016/17. The results show the original and final discrepancy percentages between the two datasets before and after the validation. In 2016/17 there was a 0.9 per cent (or 1,384 tonnes) discrepancy between the figures after validation. This is less than the discrepancy of 1.6 per cent in 2015/16. The overall final discrepancy is well within the ten per cent discrepancy target set by the Welsh Government. This is also a big improvement compared to the original discrepancies in each quarter of the year before validation.

Of the 148,477 tonnes validated by Natural Resources Wales, 137,012 tonnes were sent to landfills in Wales and 9,920 tonnes were sent to landfills in England. The remainder has been landfilled after energy from waste treatment outside of the UK. This waste has zero per cent biodegradability.

After undertaking 88 checks for the local authorities throughout the scheme year, there are four that remain over a ten per cent or 100 tonne discrepancy. The causes of discrepancies between the two datasets include:

- landfills report site returns using The List of Waste (or European Waste Catalogues), whilst local authorities report by material type in WDF. These different reporting systems cause issues when comparing and also when distinguishing municipal waste as defined under the LAS Regulations;
- private contractors may take non-local authority collected municipal waste and non-municipal waste to landfill in the same vehicles they use to collect local authority collected municipal waste. It is therefore difficult to accurately calculate the amount of local authority collected municipal waste received at the landfill site; or
- issues with stockpiling and/or apportioning municipal waste from a landfill site that is used by several local authorities.

⁷ Data entry and submission is reported via an online reporting tool (WasteDataFlow) and is split into a series of levels, from 0 (data entry) to 40 (Welsh Government). A local authority submits data to Natural Resources Wales for validation at Level 30.

Table 1. Comparison of WDF and landfill site returns data showing amount ofmunicipal waste sent to landfill in Wales in 2016/17 and discrepanciesbetween the two data sets before and after validation

Quarter	2016-17 Site Returns - MSW sent to landfill (tonnes)		2016-17 WDF - MSW sent to landfill (tonnes)*		2016-17 % Discrepancy between the two data sets	
	Original	Final	Original	Final	Original	Final
1	36,948	39,844	39,751	40,316	7.1%	1.2%
2	35,436	38,900	38,995	39,311	9.1%	1.0%
3	24,959	33,327	33,439	33,218	25.4%	0.3%
4	31,579	35,239	34,061	35,632	7.3%	1.1%
Total	128,922	147,311	146,246	148,477	11.8%	0.9%

* This is the total amount of Municipal Solid Waste (MSW) reported in WDF as sent to landfill that is checked against site returns. This figure will be slightly less than the total landfill figure, as some landfill waste is not validated due to apportioned rejects and rejects after several treatment processes where landfills cannot be identified or local authority portions are not clear.

3 Local Authority Compliance

The overall results from the 2016/17 monitoring year are shown in Annex 1 on the following pages.

The annual results show that all local authorities achieved their LAS allowance obligations during 2016/17. A total of 90,827 tonnes of BMW from Wales was sent to landfill compared to the total Wales allowance of 390,000 tonnes. This means that local authorities in Wales collectively landfilled seventy-seven per cent (299,173 tonnes) less BMW than the 2016/17 allowance.

The results show that twenty local authorities have considerable headroom to meet their future obligations as they used no more than seventy per cent of their allocated allowances. Blaenau Gwent, Cardiff, Denbighshire, Flintshire, Merthyr Tydfil, Monmouthshire, Rhondda Cynon Taf, Torfaen, Vale of Glamorgan and Wrexham all used less than 10 per cent of their allocated allowance. Bridgend, Caerphilly, Carmarthenshire, Ceredigion, Isle of Anglesey, Neath Port Talbot, Newport, Pembrokeshire and Powys used less than 50 per cent of their allocated allowance. Conwy used less than 70 per cent of their allocated allowance. Gwynedd and Swansea used over seventy per cent of their allowance.

Annex 3 shows a geographical representation of LAS performance for Wales.

Reasons for changes in the utilisation of allowances vary between years and by local authorities. Generally, changes can be attributed to:

- changes in waste collection service provision;
- changes in waste management practices and new/alternative technologies diversion of residual waste to incineration with energy recovery has had a significant affect on local authority performance for LAS in recent years;
- public participation levels in recycling schemes;
- unforseen circumstances (e.g. extreme weather).

Annex 1 – Local authority compliance against targets

Table 2. LAS Performance for 2016/17

Authority	LAS Allowance (tonnes) 2016/17	BMW landfilled (tonnes)	% of LAS 2016/17 allowance used
Blaenau Gwent	8,821	391	4.4%
Bridgend	19,025	5,579	29.3%
Caerphilly	23,119	3,115	13.5%
Cardiff	39,660	1,356	3.4%
Carmarthenshire	20,997	2,388	11.4%
Ceredigion	9,655	4,326	44.8%
Conwy	17,513	10,777	61.5%
Denbighshire	11,094	844	7.6%
Flintshire	20,621	99	0.5%
Gwynedd	17,896	14,959	83.6%
Isle of Anglesey	9,867	1,151	11.7%
Merthyr Tydfil	7,621	612	8.0%
Monmouthshire	11,378	146	1.3%
Neath Port Talbot	18,910	4,832	25.6%
Newport	15,925	3,578	22.5%
Pembrokeshire	16,178	5,057	31.3%
Powys	19,282	7,562	39.2%
Rhondda Cynon Taf	27,071	285	1.1%
Swansea	30,391	21,461	70.6%
Torfaen	11,659	745	6.4%
Vale of Glamorgan	14,579	303	2.1%
Wrexham	18,738	1,262	6.7%
Wales	390,000	90,827	23.3%
			Under 90%
			Between 90-100%
			Over 100%

Natural Resources Wales maintain a register of LAS performance for local authorities since inception of the scheme in 2004. This register can be found at <u>https://naturalresources.wales/guidance-and-advice/environmental-topics/waste-management/landfill-allowance-scheme/?lang=en</u>

Figure 1. Amount of BMW landfilled compared to allowance for local authorities in Wales 2016/17

Annex 2 – Reporting of Local Authorities

Reporting deadlines for local authorities and landfill operators (see Table 3) are set out in the LAS Regulations. Both local authorities and landfill operators have to submit municipal waste returns to Natural Resources Wales⁸ within one month of the end of that period.

Quarter	Period	Reporting deadlines
1	Data from 1 April - 30 June	31 July
2	Data From 1 July - 30 September	31 October
3	Data from 1 October - 31 December	31 January
4	Data from 1 January - 31 March	30 April

Table 3.	Statutory L	LAS reporting	deadlines
----------	-------------	----------------------	-----------

In 2008/09, Natural Resources Wales produced the 'LAS Guidance on reporting and notices' which sets out the more detailed timetable for local authorities and landfill operators to meet their obligation to provide timely and accurate data under the LAS Regulations.

Local Authorities

The LAS regulations require local authorities to submit their municipal waste data to Natural Resources Wales for validation within one month of the quarter end. Figure 2 shows the level of compliant data reporting by local authorities in Wales during 2016/17.

The level of prompt reporting in Wales in 2016/17 is slightly worse than in the previous year. Fifteen local authorities consistently reported on time throughout the year (a decrease of one from 2015/16).

The main reasons for local authorities reporting after the deadline included:

- technical issues;
- staffing and resource issues at local authorities;
- delay in local authorities receiving data from contractors; or
- extra time taken sourcing data for other reporting requirements.

⁸ Under the LAS Regulation, the 'Environment Agency' is listed as the Monitoring Authority, however, in Wales it was administered by Environment Agency Wales. The Natural Resources Body for Wales (Functions) Order 2013 transferred the Welsh devolved functions of the Environment Agency to the Natural Resources Body for Wales.

NRW reports local authority compliance with the reporting deadlines to the Welsh Government. Table 4 on the following page provides more information on local authority reporting in 2016/17.

Landfill Operators

Landfill operators are required to report the amount of municipal waste received by their sites within one month of the quarter end. Following reporting in WDF, 46 landfill sites in England and Wales were identified as receiving local authority municipal waste originating in Wales in 2016/17 - 13 in Wales and 33 in England. Waste landfilled abroad after incineration was also reported in WDF. The total number of reported landfills has decreased from 48 to 46 in England and Wales.

Local Authority	Apr-Jun 2016	Jul-Sep 2016	Oct-Dec 2016	Jan-Mar 2017

Table 4. Compliance with WDF data reporting deadlines by local authorities

N.B. Deadlines may be extended due to weekends/bank holidays, technical issues or if agreed with an authority for extenuating curcumstances. An extension of 1 week was also provided to all authorities for quarter 3 (Oct-Dec) returns to allow for the service question data to be updated.

Key

on time within 7 days over 7 days

Annex 3 – Local Authority Compliance Summary Map

Key Quality Information

- Natural Resources Wales has six weeks to validate the data. Validation involves a
 procedure of checking that all relevant WasteDataFlow questions have been
 completed by the local authorities and any discrepancies in calculations between
 entered inputs and outputs are identified. Any anomalies are then communicated
 to the individual local authorities and remedial action is taken to resolve them.
 Post validation, Natural Resources Wales also request local authorities to provide
 evidence in relation to their waste data, which is an ongoing process throughout
 the scheme year.
- 2. There may be some inconsistencies in the measurement of total waste since the waste is weighed when collected and again when it is sent for treatment. In addition, there may also be loss in weight through various treatment processes. Natural Resources Wales validate all local authority returns and require that the difference between the amount collected and the amount sent for treatment must not differ by more than 10 per cent or 100 tonnes in any quarter (whichever is the greatest figure), unless a valid explanation can be given. Natural Resources Wales has also placed more emphasis on authorities providing more evidence in relation to their waste statistics since 2012-13.
- 3. WasteDataFlow is subject to continual improvement and development that can impact on the way that data is entered and introduce new data reports based on new data requirements. Some changes can be complex in nature producing impacts in reporting that may not be fully realised initially. All changes to the system are carefully monitored for any discrepancies between data entry and reporting. In the event that discrepancies arise, the WasteDataFlow system is adjusted and any previously published data is revised or caveated accordingly.
- 4. The accuracy of the data reported to WasteDataFlow is entirely dependent on the measurement, data management and reporting by local authorities and waste operators. While Natural Resources Wales carry out validation in accordance with the Regulations, the validation of WasteDataFlow and the cross checks with other available waste data is limited to the accuracy of those reporting.

Glossary

Biodegradable

Capable of being degraded by plants and animals.

Biodegradable Municipal Waste (BMW)

The component of Municipal Solid Waste capable of being degraded by plants and animals. Biodegradable Municipal Waste includes paper and card, food and garden waste, and a proportion of other wastes, such as textiles.

Diversion (from landfill)

A term referring to avoiding sending waste to landfill where it can be sent to an alternative waste management option that is better for the environment. The waste hierarchy is set out at Article 4 of the revised Waste Framework (Directive 2008/98/EC). This gives top priority to preventing waste in the first place. When waste is created, it gives priority to preparing it for re-use, then recycling, then recovery, and last of all disposal (e.g. landfill).

Green house Gas

A term given to those gas compounds in the atmosphere that reflect heat back toward earth rather than letting it escape freely into space. Several gases are involved, including carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), ozone (O₃), water vapour (H₂O) and some of the chlorofluorocarbons (CFCs).

Incineration

The controlled thermal treatment of waste by burning, either to reduce its volume or toxicity. Energy recovery from incineration can be made by utilising the calorific value of the waste to produce heat and/or power.

Landfill Allowances Scheme (LAS)

The purpose of the Landfill Allowances Scheme is to ensure diversion of biodegradable municipal waste (BMW) from landfill. Welsh Government allocate statutory limits on the amount of BMW waste that local authorities in Wales can landfill. Welsh Government can apply financial penalties to Welsh local authorities for exceeding allowances and failure to comply with reporting requirements.

As monitoring authority for the scheme, Natural Resources Wales validates waste data submitted from Welsh local authorities and determines the amount of BMW sent to landfill by each local authority.

Landfill sites

Any areas of land in which waste is deposited. Landfill sites are often located in disused mines or quarries. In areas where they are limited or no ready-made voids exist, the

practice of landraising is sometimes carried out, where waste is deposited above ground and the landscape is contoured.

List of Waste (European Waste Catalogues)

Serves as a common encoding of waste characteristics in a broad variety of purposes like classification of hazardous wastes. Assignment of waste codes has a major impact on the transport of waste, installation permits (which are usually granted for the processing of specific waste codes), decisions about recyclability of the waste or as a basis for waste statistics.

Local authority municipal waste

Includes household and non-household waste that is collected and disposed of by local authorities. It includes regular household collections, specific recycling collections, special collections of bulky items, waste received at civic amenity sites and waste collected from non-household sources.

Local Authority Recovery Targets (LART)

The Local Authority Recovery Targets were set under the Waste (Wales) Measure 2010 by Welsh Government and are intended to promote higher levels of recycling and to realise associated wider sustainability benefits.

Mass Balance Approach

The mass balance formula is applied quarterly to calculate the biodegradable content of landfilled local authority municipal waste for each local authority. Welsh Government have deemed Welsh local authority municipal waste to be 61% biodegradable. The formula uses the data reported to WasteDataFlow to adjust this percentage based on the biodegradability of waste diverted for recycling, reuse and composting. This adjusted percentage is used to calculate the biodegradable content of landfilled waste.

WasteDataFlow (WDF)

Since 2004-05, waste data for the amount and type of local authority waste collected and how it is disposed of are collected through an online reporting system called WasteDataFlow (www.wastedataflow.org). In Wales this is managed by Natural Resources Wales.
